InvivoChem strongly recommends customers to read literature methods/protocols carefully before determining which formulation you should use for in vivo studies, as different compounds have different solubility properties and have to be formulated differently.</p> <p style="text-align: center;">(Please use freshly prepared in vivo formulations for optimal results.)</p>

Preparing Stock Solutions		<b>1 mg</b>	<b>5 mg</b>	<b>10 mg</b>
	1 mM	2.2643 mL	11.3213 mL	22.6426 mL
	5 mM	0.4529 mL	2.2643 mL	4.5285 mL
	10 mM	0.2264 mL	1.1321 mL	2.2643 mL

**\*Note:** Please select an appropriate solvent for the preparation of stock solution based on your experiment needs. For most products, DMSO can be used for preparing stock solutions (e.g. 5 mM, 10 mM, or 20 mM concentration); some products with high aqueous solubility may be dissolved in water directly. Solubility information is available at the above Solubility Data section. Once the stock solution is prepared, aliquot it to routine usage volumes and store at -20°C or -80°C. Avoid repeated freeze and thaw cycles.
